

The background of the slide features a large, light blue octagonal shape containing a white ship's wheel, which is the logo for Kubernetes.

Kubernetes CronJob Controller

avengeHERs

22th July 2024

Here's the team!

- Meghna Mandawra
- Srishti Dutta
- Khushi S.

Progress

- Completed setup of:
 - Kind
 - Kubebuilder
 - Docker Desktop
- Integrated Docker Desktop with WSL and Kubernetes
- Learned the basics of Go language
- Learned Kubernetes fundamentals and service behaviors

Progress

- created an API for our custom resource.
- defined the Custom Resource.
- Created a unique pod designed to address specific issues.
- Implemented reconciliation logic to ensure the Pod object is created and maintained.
- Implemented readPodLogs to retrieve and return logs from a specified Pod using the Kubernetes client-go library.
- Ran tests on the controller to check if it was reconciling properly.

Progress

- 
- The background of the slide features a large, light blue octagon containing a white ship's wheel, which is the logo for Kubernetes.
- Started working on Cronjob Controller.
 - Added the resources created by kubebuilder.
 - Initialised the kubebuilder project and called the api.
 - Added the Cronjob Specs.
 - Added the policy to check concurrency.
 - Added the code for the cronjob status.

Challenges Faced

- 
- The background of the slide features a large, light blue octagon with a white ship's wheel (Kubernetes logo) centered within it.
- Setup Complexity:
 - Configuration challenges due to unfamiliar system requirements.
 - Optimization of system resources like memory and processing power.
 - Package Management:
 - Version conflicts causing installation delays.
 - Challenges with package downloads due to connectivity issues.

Next Steps

- Build the final controller.
- Test to ensure the controller is functioning properly
- Do the final testing with proper microservices deployed on Kubernetes
